MX SERIES OVAL GEAR FLOWMETER

INSTRUCTION MANUAL

To the Owner

Please read and retain this instruction manual to assist you in the operation and maintenance of this product.

The manual contains operating and maintenance instructions for the MX-Series Flow Meters. This covers port sizes from 1/4" to 4".

Refer to separate instruction manual for information on operating modes and features of LCD displays. Contact local representative or distributor for further assistance.

This Flow Meter has incorporated the oval gear principle into its design. Exceptional repeatability and high accuracy over a wide range of fluid viscosities and flow rates are features of the oval gear design.

With a low pressure drop and high pressure rating oval gear flow meters are suitable for both gravity and (in-line) pump applications.

Macnaught offers a comprehensive set of web based support materials to complement this instruction manual.

Access the Instruction manual by scanning below QR code.

IMPORTANT INFORMATION

(READ CAREFULLY)

FLUID COMPATIBILITY: Before use, confirm the fluid (liquid) to be used is compatible with the meter. Refer to industry fluid compatibility charts or consult your local representative or distributor for advice.

FLOWMETER USAGE: The flow meter shall be used exclusively with liquids. No gases permitted to flow. Presence of gases could create severe hazard and damage

STRAINER: To prevent damage from dirt or foreign matter, it is recommended that a Y type or Basket type mesh strainer be installed as close as possible to the inlet side of the meter.

- Meter 1/4" 74 micron / 200 mesh
- Meter 1/2" - 2" 250 micron / 60 mesh
- Meter 3" - 4" 420 micron / 40 mesh

When a strainer is installed it should be regularly inspected and cleaned. Failure to keep the strainer clean will dramatically effect flow meter performance. Contact your local representative for advice.

AIR PURGE / LINE PRESSURE: To prevent damage caused by air purge, slowly fill the meter with fluid. To reduce pressure build-up turn off the pump at the end of each day.

OPERATING PRINCIPLE

Fluid passing through the meter causes the rotors to turn, as shown below. One of the rotors (the active rotor) is fitted with magnets.

The passing of the magnets are picked up by the electronic sensor. The excitation of this switch provides a 'Raw Pulse Output' which relates to the K-Factor. (e.g. KF 36 = 36 pulses per litre of fluid passed)

This Pulse Output Signal can either be fed to an external receiving element (e.g. Data Logger or PLC) or alternatively to an LC Display which conditions the Pulse signal to display volume of fluid passed. (e.g. Display 1 Litre per for every 36 pulses received)

INSTALLATION PROCEDURE

1. It is recommended that a bypass line be included in the design. This provides the facility for a meter to be removed for maintenance without interrupting production. (see figure)

2. Use a thread sealant on all pipe threads. Thread tape must not enter flow meter as this could stop flow meters operation.
3. For pump applications ensure pipe work and meter have the appropriate working pressure rating to match the pressure output of the pump. Refer to meter specifications section for further details. (Page 7)
4. Install a Y type or basket type mesh strainer as close as possible to the inlet side of the meter.

Meter 1/4"	74 micron / 200 mesh
Meter 1/2" - 2"	250 micron / 60 mesh
Meter 3" - 4"	420 micron / 40 mesh

Note !

The flow meter can accept flow in any direction.

5. The meter can be installed in any orientation as long as the meter shafts are in a horizontal plane as per the picture.

Incorrect installation can cause premature wear of meter components.

Note !

Do not over tighten meter connections.

7. It is important after initial installation to fill the line slowly, high speed air purge could cause damage to the rotors.
8. Test the system for leaks. Do not continue use if meter is leaking.
9. Check the strainer for swarf or foreign material, after the first 200 litres, check periodically, particularly if the flow rate is noted to be decreasing.

MAINTENANCE PROCEDURE

Note !

Inspection and maintenance should only be carried out by experienced personnel.

DIS-ASSEMBLY

Note !

When maintenance to any part of the flow meter is required, it must be isolated and line pressure released. It must be removed from the line if required. Use non sparking tools to accomplish the job.

Note !

It is advisable to mark all components with a marker pen before disassembly, to ensure all the components are replaced to their correct position during the reassembly process.

1. Remove the meter cap by loosening the bolts on the underside of the meter body. (see FIG 1, Page 6)
2. Remove the O-Ring from the O-Ring groove. Clean it nicely and store in clean place.
3. Remove rotors from the cap and shaft assembly. The shafts are fixed to the cap for sizes 1/4" - 2" and to the body for 3" and 4" sizes. No need to take them off.

Note !

Do not remove shafts from their location.

RE-ASSEMBLY

1. Before reassembling, check the condition of flow meter parts (rotors, body, cap, seal O-ring and shafts). Replace if necessary. Contact Macnaught to check for spare parts availability.
2. One of the rotors is active (have magnets) and other one is neutral. The active rotor can be identified by running a metal object over the face of the rotor. Place both the rotors at 90° to each other onto the shafts. Spin them to check if they move freely. If not, repeat the process.

- **Active Rotor Placement into Flow meter:**

MX06 - MX09 Meters:

The active rotor is positioned nearest to 'dimple' on the meter cap (see FIG 2, Page 6)

The smooth side of rotor showing up, grub screw will face downwards.

The chamfered side of the rotor stays upward when placed on to the shaft (see FIG 6, Page 6)

MX12 - MX50 Meters:

The active rotor is positioned nearest to 'dimple' on the meter cap (see FIG 2, Page 6)

Meter cap dimple must face towards the flow meter body dimple (see FIG 2 & 3, Page 6)

The magnet side face upward when placed on the cap

For MX75 - MX100 meters:

Active rotor is positioned on to the shaft away from the flow meter foot. (see FIG 7, Page 6)

The magnet side of the active rotor face upward when placed inside the flow meter body.

3. Smear the O-ring with light film of grease and placed into the Groove (see FIG 3, Page 6)
4. Place the meter Cap on the meter Body.
Meter cap dimple must face towards the flow meter body dimple (MX06-MX50 Meters) (see FIG 2 & 3, Page 6)
5. Insert the cap head screws and tighten in a diagonal sequence 1, 5, 7, 3, etc.

Bolts Torque Ratings:

MX06-MX12	(6.5 Nm)
MX19-MX25	(15 Nm)
MX40-MX100	(33 Nm)

6. Test the meter by turning the rotors with a finger or by applying very low air pressure (no more than a good breath) to one end of the meter, before returning the meter to service.

PICTORIAL REPRESENTATION OF FLOWMETER AND DISASSEMBLED PARTS

**Flow meter
FIG 1**

Note ! For MX06 and MX09 meters, the flat side of rotors with chamfer on edges face upward when placed on cap and shaft assembly of meter

FIG 7

FLOWMETER SPECIFICATIONS

Flow Meter Series	Flow Range (Viscosity < 5 cP)		Flow Range (Viscosity > 5 cP)	
	Metric	US	Metric	US
MX06	2 to 100 LPH	0.5 to 26 GPH	0.5 to 100 LPH	0.13 to 26.4 GPH
MX09	25 to 500 LPH	6.6 to 132 GPH	15 to 500 LPH	4 to 132 GPH
MX12	3 to 25 LPM	0.8 to 6.6 GPM	2 to 30 LPM	0.5 to 8 GPM
MX19	8 to 70 LPM	2 to 18.5 GPM	3 to 80 LPM	0.8 to 21 GPM
MX25	10 to 100 LPM	2.6 to 26 GPM	6 to 120 LPM	1.6 to 32 GPM
MX40	15 to 235 LPM	4 to 62 GPM	10 to 250 LPM	2.6 to 66 GPM
MX50	15 to 500 LPM	4 to 130 GPM	15 to 500 LPM	4 to 130 GPM
MX75	60 to 600 LPM	17 to 170 GPM	20 to 733 LPM	5 to 194 GPM
MX100	220 to 1000 LPM	60 to 250 GPM	120 to 1200 LPM	30 to 300 GPM

Note !

Ensure the Flow meter is fitted with 'High Viscosity Rotors' if the fluid being metered is 1000 cP or above.

Flow Meter Series	Temperature Range
Temperature Range (MX06P - MX50P)	-40°C - 150°C ¹
Temperature Range (MX06S - MX100S)	-40°C - 120°C ¹
Temperature Range (MX06F - MX50F)	-40°C - 80°C ²
Temperature Range (MX75F - MX100F)	-40°C - 120°C ¹
Accuracy (MX06 - MX100)	±0.5% of reading

Note !

- 1 Flow meter process temperature range may be limited to sensor temperature classification.
- 2 Flow meter process temperature range is limited due to PPS rotors.

Flow Meter Series	Maximum Operating Pressure* (Flow meter Threaded)		Maximum Operating Pressure* (Flow meter Flanged**)	
	kPa	psi	kPa	psi
MX06	6895	1000	-	-
MX09	6895	1000	-	-

MX75	1200	175	1200	175
MX100	1200	175	1200	175

Note !

- * Conforms to Directive 2014/68/EU
- ** Flanges Standard (ASME B16.5, Group 2-2.3 Materials)

Flow meter Output Types

Pulse output		
A	1 x Hall Effect Switch & 1 x Reed Switch	MXD-AS
I	Dual Reed Switches	MXD-IS
J	Dual Hall Effect Switches - Quadrature Pulse	MXD-JS
K	High Resolution Sensor	MXD-KS
T	High Temperature Sensor	MXD-TS
Local Digital Display		
D	PR (LCD 12 mm Display)	MXD-DS
E	PRA * (LCD 12 mm Display)	MXD-ES
F	ER (LCD 17 mm Display)	MXD-FS
G	ERA * (LCD 17 mm Display)	MXD-GS
H	ERB (LCD 17 mm Display)	MXD-HS
M	PRM * (LCD Blind 4 - 20 mA Display)	MXD-MS

Note !

Reed Switch: Reed Switch is a 2-wire device which triggers by magnet inside the rotors as they spin. To maximise the life of the reed switch, the pulse board comes equipped with a 1k8Ω current limiting resistor in series.

Reed Switch

Note !

Hall Effect Switch: Hall Effect switch is a 3-wire device which triggers by south pole of the magnet inside the rotors as they spin. This switch is NPN type. The switch circuit is equipped with a 4k7Ω pull-up resistor between signal and supply.

Hall Effect Switch

Note !

* **Analogue outputs** are available as an auxiliary display signal by including ERA, PRA and PRM with the flow meter. PRA and ERA display also output scalable pulse.

Note !

Instruction manual for local displays to be seen separately. Part numbers as under:

Note !

** MXD-KS has one hall effect high resolution sensor.

Illustration

Standard Pulse Cap fitted to 1" meter

Assembly/Disassembly

- 1. Rotate the pulse cap 90° anticlockwise to disassemble
- 2. Pull the cap away from body

- 3. Place pulse cap onto the body and rotate 90° clockwise to reassemble

No Tool required to assemble/dissemble

Industrial Pulse Cap is fixed to the flow meter and does not incorporate M-lock feature. It comes with Conduit Entry to facilitate customers for own wiring.

Cable Specifications for Standard/Industrial Pulse Cap

Minimal cable specification recommended for wire:

- 5 core, 24 AWG each
- drain wire AND shielding/ copper braiding
- Temperature rating: -20 - 80 °C
- Voltage rating: 300 V

- Maximum cable length should not exceed 60 metres.
- If cable is extended and/or longer than 10m, it is highly recommended to use 24V power supply for Hall Switch and reed switch.

The Industrial Pulse Cap comprises of 3 major components.

1. Industrial Pulse Cap
2. PCB (sensor board)
3. Secure Base Plate

In order to access the PCB, or for the removal/replacement of the complete Pulser Module, the Following procedure applies.

Disassembly/Reassembly

- Remove the 4 socket head cap screws holding the Industrial Pulse Cap to the Base Plate. Take care not to lose the gasket.
- Lift the Pulse Cap to expose the terminal block for the connection/disconnection of the signal cables.
- The PCB can be removed by loosening the two screws securing it to the Base Plate.
Note: It is not necessary to remove the PCB if the objective is to remove the complete base plate (see next step)
- To separate the Base Plate from the Flow meter body, remove the stainless steel Circlip.

Note !

Reassemble by reversing the above sequence.

DIN Compact Pulse Module incorporates the M-LOCK (¼ turn) mounting system. It provides a locking facility for added security against unauthorised removal. A locking screw is supplied with DIN compact pulse cap to accomplish the job by fitting module to the flow meter using M-lock feature and replacing the existing screw with locking screw.

Note !

During initial installation of the locking screw, the screw **will need to pierce** the bottom of the pulser. This will enable the screw to 'lock' into the plastic cam that is fixed to the flow meter.

The available options are:

- DIN Module with 1 x Reed and 1 x Hall effect sensor (**MXD-RH**)
- DIN Module with Dual Hall Effect sensors (**MXD-HH**)
- DIN Module with Dual Reed Switches (**MXD-RR**)

M12 DIN Female Cable Connector

General	
Connector	M12 (right angle)
Standards / regulations	IEC 61076-2-101
Technical Specifications (Plug and socket)	
Number of positions	5
Protection	IP67
Material of body	TPU (thermoplastic polyurethane)
Rated voltage / current	60v / 4A
Contact resistance	Max 5 mΩ
Ambient temperature (plug and socket)	-25°C - 90°C
Technical Specifications (cable)	
Core Number	5 core
Core colours	brown, white, blue, black, green-yellow
Cable material	PUR (polyurethane)
Conductor cross section	5 x 0.34mm ² (signal lines)
Rated voltage / current	60v / 4A
Ambient Temperature (operation)	-25°C - 80°C (cable, fixed installation)
Cable resistant to	acids, alkaline solutions and salt water

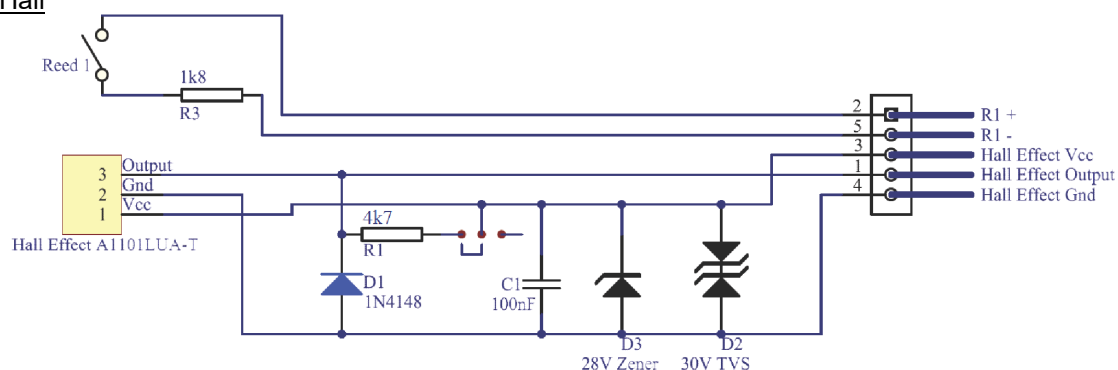

M12 Field Connector

General	
Connector	M12
Standards / regulations	IEC 61076-2-101
Technical Specifications	
Number of positions	5
Protection	IP67
Conductor cross section	0.25mm ² - 0.75mm ²
Material of body	PTB
Sealing material	NBR (nitrile rubber)
Ambient temperature	-25°C - 85°C (plug and socket)
Rated voltage / current	60v / 4A

Output Signals	Standard Pulse Meter		2 x Digital (Square Wave)
Reed Switch (Mechanical Sensor)	Current	Maximum	500mA
	Voltage	Maximum	30V DC
	Contact Rating	Maximum ¹	10W
Hall Effect Switch (Electronic Sensor)	Maximum Supply Current		7.5mA
	Maximum Output Current		25mA
	Operating Voltage		4.5V to 24V DC
	Output Type		Open-Collector NPN

¹.Contact rating maximum is 10W. Neither current nor voltage maximums should be exceeded in achieving this.

INSTALLATION OF FLANGES ON MX25, MX40 AND MX50 METERS

1. The locknut, gasket, O-ring and retaining ring to be fitted as shown in the below picture. (Make sure that the O-rings and gaskets must not have any damages)
2. Both flanges to be equally screwed to the meter body meeting end to end dimensions and bolt pattern on the flange face
3. The lock nuts to be tightened to a specified torque as mentioned in the below table

Note !

Use a good quality grease for Gasket & O-ring and a good quality anti-crease on flange threads

TROUBLESHOOTING GUIDE

Problem	Cause	Remedy
Fluid will not flow through meter	a) Foreign matter blocking rotors b) Line strainer blocked c) Damaged rotors d) Meter connections over tightened e) Fluid is too viscous	a) Dismantle meter, clean rotors (strainer must be fitted in line) b) Clean strainer c) Replace rotors (Strainer must be fitted in line) d) Re-adjust connections e) See specifications for maximum viscosity
Reduced flow through meter	a) Strainer is partially blocked b) Fluid is too viscous	a) Clean strainer b) See specifications for maximum viscosity
Meter reading inaccurate	a) Fluid flow rate is too high or too low b) Air in fluid c) Excess wear caused by incorrect installation	a) See specifications for minimum and maximum flow rates b) Bleed air from system c) Check meter body and rotors. Replace as required. Refer to installation instructions
Meter not giving a pulse signal	a) Faulty hall effect switch b) Faulty reed switch c) Magnets failed	a) Replace PCB Board b) Replace PCB Board c) Replace magnets
LCD register not working	a) Battery not connected properly b) Battery flat c) Faulty wiring connections d) Faulty LC Display e) Faulty connection from LC Display	a) Check battery connections b) Replace battery c) Check wiring for loose or faulty connections d) Replace LC Display e) Check wiring connections

TESTING REED / HALL SWITCHES

Testing of **Reed Switch** requires Neodymium magnet (at least 220 Gauss) and Macnaught display/PLC/FMS/Ohmmeter/Multimeter. If changes in reading are seen by waiving magnet near the reed switch, means it is working fine. Otherwise, the reed switch is faulty.

Testing **Hall Effect Switch** requires Neodymium magnet (at least 220 Gauss), Power Supply/Battery (4.5 - 24 V DC) and Multimeter/Voltmeter. Correct wiring is shown in the picture. Check if only one of the magnet poles changes the signal reading on the voltmeter. It is a clear indication that the switch is working perfectly. If hall switch signal is not changing then Hall switch is faulty.

MAINTAINENCE VIDEOS

Macnaught provides an comprehensive set of 'Maintenance Videos' to assist the end user in all aspects of service and / or repair of the flow meter range.

This web based resource can be accessed by scanning the QR.

FEP - PTFE Encapsulated

SS 316 - Stainless Steel 316

AL - Aluminium Alloy

FKM - Viton ®

PPS - Polyphenylene Sulphide (PPS Resin)

PEEK - Polyether ether ketone

* Currently Unavailable

** SS 316 rotors are assembled with carbon bushes.
PPS and PEEK rotors do not have carbon bushes.

PRESSURE DROP vs VISCOSITY

Figure 7: Impact of viscosity on pressure loss for a range of flow rates

Note: For viscosities greater than 1000 cPs High Viscosity rotors are required

WALL MOUNT ADAPTOR (MX06 - MX25)

Wall Mount Adaptor Bracket is used to mount flow meter to the wall

Dimensions	A (Ø mm)	B (Ø mm)	C (mm)	D (mm)	E (mm)	F (mm)	G (mm)	H (Ø mm)	I (mm)	J (mm)	K (Ø mm)
MX06 - MX09	6	5.5	45	58	71	45	65	100	6	42	M5x0.8
MX12	6	5.5	47	69	81	47	73	113	6	49	M5x0.8
MX19	7	6.6	61	85	100	61	95	143	6	62	M6x1.0
MX25	7	6.6	61	85	100	61	95	143	6	75	M6x1.0

A Wall Mount Holes (4)

B SS Countersunk screws to be supplied with the wall mount bracket
 5 mm in diameter and 16 mm in length for MX06 - MX12 meters
 6 mm in diameter and 20 mm in length for MX19 - MX25 meters

K Earthing Point

WALL MOUNT THREAD POSITION ON FLOWMETER'S CAP (MX06 - MX50)

	A	B	C	D
MX06	45	M5 x 0.80	45	42
MX09	45	M5 x 0.80	45	42
MX12	47	M5 x 0.80	47	49

WEEE Directive - Waste Electrical and Electronic Equipment

The WEEE Directive requires the recycling of waste electrical and electronic equipment in the European Union.

Whilst the WEEE Directive does not apply to some of Macnaught's products, we support its policy and ask you to be aware of how to dispose of this product.

The crossed out wheelie bin symbol illustrated and found on our products signifies that this product should not be disposed of in general waste or landfill.

Please contact your local dealer national distributor or Macnaught Technical Services for information on product disposal.

Note:

This product should be disposed of according to all applicable local and national government environment regulations and guidelines.
